PROJECTS

Automated Criminal Face Recognition system — *For the purpose of identifying criminals and notifying the police, we have developed an automated criminal face recognition system. Flask Framework, Firebase Cloud Messaging API, Python, Face recognition, Android, Kivy, Buildozer, Opencv, and Sqlite are some of the main technologies utilised in this project.*

A Gesture Based Tool for Sterile Browsing of Radiology Images— Medical practitioners may process radiology pictures with this web app, which I made using the Flask framework.

Personal portfolio website - I made a portfolio that resembles a comic. My future objectives, my talents, my certifications and accomplishments, and my social media profiles are all described on the website.
